Green IT Supports AMS with Contractual Compliance Tool

PHILADELPHIA, Pennsylvania – Advanced Microgrid Systems is pleased to announce Green IT Energy Applications as their provider of Compliance Management software. Originally launched in Q2 2018, the Green IT platform provides comprehensive risk management services related to portfolio contractual obligations.

Based in San Francisco, AMS is an energy platform and services company that assesses, designs, develops, finances, aggregates, optimizes, and monetizes portfolios of distributed energy resources (DER) to maximize customer value, provide dynamic grid and utility services, and earn revenues in wholesale energy markets.

AMS commissioned Green IT to assemble a custom software package with the following key features and functionality:

- **Risk Management**
- **Data & Reports**
- **Alerts & Notifications**
- **Agreement Expiration Tracker**

“Green IT’s commitment to the success of AMS is evident in all aspects of our highly personalized system. By having a centralized repository to access, search, dissect, track, and report on the data of many of our contracts we are able to ensure we remain compliant as our portfolio continues to expand. As we continue to grow, we are glad Green IT will be there with us,” says AMS Senior Manager Matt Lerner.

Green IT CEO Andrew Eisenberg comments, “Launching the AMS Contract Compliance platform was a milestone for our organization that demonstrated the capacity for Green IT’s renewable energy platform to expand to the related vertical of Battery Storage. As a leader in the DER space, AMS offered Green IT a great opportunity to learn about the industry, technology, and critical data.”

As our partnership with AMS moves forward, Green IT will focus its attention on helping AMS extract the most value out of its data.

About Green IT

Green IT Energy Applications™ provides software solutions and comprehensive IT services for the renewable energy industry. Since 2002, Green IT has pioneered technology-driven strategies that optimize all stages within the lifecycle of an asset, from origination through planning, execution, operations, and asset management. Green IT’s Smart Software catalog combined with our team’s industry-specific expertise equip us to add value to assets of any size or class.
