Green IT Announces Angular Refactor

PHILADELPHIA, Pennsylvania - Green IT is thrilled to announce it has completed a front end refactor with an Angular.

This release represents a major leap forward for all features on the Green IT Renewable Energy OS, offering usability enhancements, responsive UI, faster performance, and a more spacious layout.

Built and maintained by Microsoft, Angular TypeScript is a front end structure that transforms static HTML pages into dynamic user interfaces. Angular is "faster, smaller, and easier to use," which explains why Google Adwords, Adsense, Whatsapp, and PayPal have all built their platforms with Angular.

Angular's integration of declarative templates, dependency injection, and end-to-end tooling streamlines the process of building progressive web apps. Angular has quickly soared in popularity within development communities across the globe.

Green IT Senior Systems Engineer Chris Jensen writes, "As our application complexity grew, we realized that we needed to take a different development approach to keep moving in the right direction for the long term. After considering the available options it became clear that Angular offered many features that would align with our strengths. Our experience has been very positive with better code organization, readability, and maintainability in a fast-paced group environment."

With our Angular refactor firmly in place, Green IT has a number of enhancements in the pipeline scheduled for Q3 and Q4, including enhanced file management integration, new calendar features, and expanded operational data reporting.

About Green IT
Green IT Energy Applications™ provides software solutions and comprehensive IT services for the renewable energy industry. Since 2002, Green IT has pioneered technology-driven strategies that optimize all stages within the lifecycle of an asset, from origination through planning, execution, operations, and asset management. Green IT's Smart Software catalog combined with our team's industry-specific expertise equip us to add value to assets of any size or class.
